For this project I tried using the tools we were shown in class. It was a bit challenging to remember how they worked and I ended up using youtube tutorials to make it work. I used ways to change the balls colors and I ended up making the background into a 3d object so it could be effected by a light source. Looping the animation was also a bit of a challenge but through alot of trial and error i was able to find out what worked and what didnt.
