

Carboard Materials Pack

1- Painting with black information add teared off pieces of cardboard. Working with a grunge alpha and angle jitter works fine for this kind of mask

2- Painting black information into the Teared mask displays the cardboard background layer.

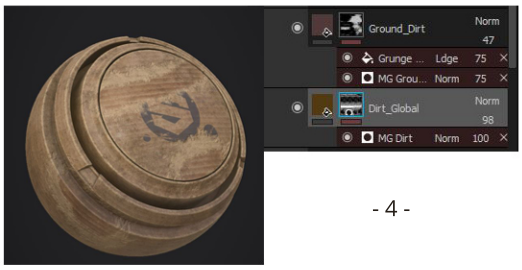

- 3 -

Teared Curvature : Adds damages based on your curvature map using the teared material

Ink : You can add a logo or some text into the layer mask. The folder mask is a grunge map to give a natural look to the logo.

Surface Height : Changes the thickness between the surface and the teared layer. This option is also available between the teared layer and the background

- 4 -

Ground dirt : Wet dirt based on the world position map
Dirt Global : Global dirt of the multiple spaces surface.

5 - You can add colored cardboard on top of your material. Parameters change the HUE, Saturation and Lightness. The height layer controls how thick your patches are.

6 - You can play with th different parameters to achieve different types of cardboard. You can also add two different types of tape. Duct tape material is also included.

The bottom image is an example of how I worked with those materials on an actual student game using Unity (Cheestory). More infos on my portfolio.

Feel free to e-mail me for further support, feedbacks or to show me how you played with my materials
