This was definitely a struggle for me. I did it all Wednesday and the videos were posted today so there was a lot I missed. I didn't even know the quadraw was a thing. I just bridged everything together that i needed but now that i know it exists i might try to use it in the future. Another small thing I realized probably too late was that we were supposed to be modeling animals so I probably made this a lot harder than it had to be for this assignment but i dont mind too much and technically it is still an animal by the broadest definition. I had to solve a lot of small problems and in the end there is still alot i have to learn.
