I had fun working on this but there are so many different presets to choose from I became paralyzed with indecision so I looked up some youtube tutorials on how to use them effectively. I used what I learned for a base then added to them changing settings till i got it to look the way I wanted.

I also choose to do magic the gathering card names because they fit very well in it.

I encountered a weird problem where the background color of the composition would always be black when I rendered it so I created a shape layer and blew up the shape so it covered the canvas with only one color and set it to the back layer. It was definitely not a pretty solution but it worked so thats what matters
