https://github.com/tbmkylerogers-lab/Animation-Program

I went into this assignment having never touched substance designer before. I can see why it exists and how it can be helpful but i feel for the most part its a lot easier to find a free texture online than building it myself. But for rare cases it has its use.

I chose to do an alien rock design for this assignment. I was trying to design a rock but in messing around I found a material called plasma that I found to be super cool. I plugged it into a lot of things and in the end i think it turned out looking great
