

It has been a while since the last time I modeled in maya. I forgot how much fun it can be to problem solve and learn. I was able to quickly pick it up again without too much trouble. I chose to do a desk fan because I thought it would be a fun challenge with some curvy shapes and geometric shapes that would be fun to try to model. The only part I disliked was when I forgot to save and lost a chunk of time having to redo the things I lost. That is one thing I wish I remembered from maya: how much i need to save. But it wasn't too bad and ive definitely have learned my lesson from that and it wont happen again...i hope
