Keeping consistency across props wasn't too hard. I just followed the reference image to the best of my abilities then where I couldn't I would look for a close replacement.

I think it looks decently close to the reference image which is what i was going for so thats what worked well

If I had more time I would learn how to make the windows transparent. I made them reflective instead but it doesn't look quite right. I would also spend the time to texture each object individually (like the assignment said) its not difficult to do that but it takes so much time to plug all the files into the hypershade. Maybe theres a faster way to do that i could learn
