This assignment was so hard for me. I spent over 8 hours today struggling with this and it doesn't even look that good. Most of it was trying to understand why my perspective wasn't working and beating myself up over it mentally . On paper it's super easy to make the perspective lines line up; this was not the case with maya. I first tried with a more complicated library image but I got so frustrated with it I eventually switched to a simple bathroom. Even with switching, I could not make the perspective work properly. Whenever I got one side to line up I could not get the other to line up even after messing a ton with the focal length (you made it look so easy). I had to just work with what I got and hope for the best. The blocking out stuff was very easy in comparison. It is still pretty rough though because I had to speed through it.
