I was a little behind because I forgot to model more in maya last week because i was rushing to finish. So today I finished modeling the faucets and other smaller bathroom stuff then immediately went into texturing and putting the textures back into maya. Normally I would have put them all on one uv map because they are a lot of the smaller stuff and were very similar textures on them but you appeared like you would rather they all be individual so I did that. I learned how tedious it is to put all the texture files in maya. That took so much time and it was kinda boring and mindless. I feel like I could have refined the models a little more so i might go back and do that before next week.
